3 TEST ASSESSMENT

The KSL Classified is ready for customer use. The 3 bugs found are low risk and should affect the everyday user. The site is very sensitive to window size but that is intended for different mobile device size or even window size on a desktop. As the site is arranged for window size, features still work as expected, but different automated test would have to be made for that

4 TEST RESULTS

5 Test cases were performed with a total of 10 executions run. Only 1 failed. This was to test boundaries of the input fields. As for the everyday user, each tool can be run successfully without risk of major defect. The website is currently up and running as of this report

5 SUGGESTED ACTIONS

Address bugs as per Development team priorities
